Binance Smart Chain (BSC) was developed as a means of utilizing solidity-based smart contracts with much greater speed and efficiency than other, competing chains. With decentralized exchanges on BSC offering lightning-fast swaps and extremely low fees, BSC has started to become one of the most widely used blockchains for Decentralized Finance (Defi). BSC uses a token protocol developed by the Binance Team called BEP-20. Known for 5 second block speeds much faster than doge with 1 minute block speeds. These 2 articles compare block speed:

Doge 1 Minute:

Bep-20/BSC 5 seconds:

Advantages of the Binance smart chain are:

It's a sovereign blockchain, which will provide security and safety to all users and developers.

Its native dual chain interoperability will allow cross-chain communication and scaling of high-performance dApps that require a fast and smooth user experience. It's EVM-compatible and will support all of the existing BNB toolings along with faster and cheaper transactions. Its on-chain governance with Proof of Staked Authority consensus, built on 21 validators who validate the transactions, will provide decentralization and enable significant community involvement.

Doge Yellow Coin (DOGEY) is not responsible for the actions of the Binance smart chain network

05 Doge Yellow Coin (DOGEY) Protocol

Doge Yellow Coin (DOGEY) employs 3 simple functions: Reflection + LP acquisition + Burn. In each trade, the transaction is charged a 10% fee, which is split 2 ways.

5% fee = redistributed to all existing holders

5% fee is split 50/50 half of which is sold by the contract into BNB, while the other half of the DOGE YELLOW COIN (DOGEY) tokens are paired automatically with the previously mentioned BNB and added as a liquidity pair on Pancake Swap.

30%+ of the total supply has been burned so far so 30%+ of the 5% redistributions are burned with every transaction

We have a charity wallet with 2.2% of the total supply which receives redistributions to donate to our charity partners.
